

ERYND · 1 — Today, running on your computer

Everything except the AI itself runs on your laptop. The AI lives in Anthropic's cloud and is reached over the internet.

You / users

Frontend

Backend

Database

Outside services

YOU

Web browser

You open **localhost:5173** and chat. You click buttons; you read answers.

▼ you type a message

FRONTEND · REACT + VITE

The interface

All the screens, charts and panels. Draws what you see and forwards your message to the backend. Holds **no secrets**.

▼ asks the backend "what should I answer?"

BACKEND · EXPRESS (NODE)

The brain / API

Receives the message, decides what to do, talks to the database and the AI, sends a clean answer back. Your secret API key lives **only here**.

————— it then talks to two places —————

DATABASE · SQLITE (ONE FILE)

The memory

A single file on your disk holding the demo data — mentions, warnings, journalists, the action board, chat history.

OUTSIDE SERVICE · OVER THE INTERNET

Claude Sonnet 4.6

Anthropic's AI. The backend sends it your message; it writes the reply and picks which panel to open. Billed per use via your API key.

COMPONENT

PLAIN ENGLISH

RUNS ON

Browser		You. The window you click around in.	your computer
Frontend	React + Vite	The "face" — every screen and chart. Sends your messages onward; never stores keys.	your computer
Backend	Express / Node	The "brain" — the only part allowed to hold the secret AI key, read/write the database, and call the AI.	your computer
Database	SQLite	The app's memory — one file holding all the data. Built so it can graduate to a bigger database later.	your computer
Claude Sonnet 4.6	Anthropic API	The actual intelligence. Reads the conversation, writes the response. Rented per-use; you don't host it.	Anthropic's cloud

The safety net: if the AI key is missing or the internet drops, the backend quietly answers with built-in canned responses instead of failing. That's why the demo always works, even with no key.
